

Hinge Pin Modification

The following modification allows the user to easily remove the printer cover for paper loading purposes on the Mark 1 moisture analyzer:

1. Remove shoulder bolt at the center hinge point. The new pin will replace this bolt.
2. Install new pin in the same direction as the original shoulder bolt. Install the e-clip on the left side of the center hinge point.
3. Slide printer cover on the new pin then install the nylon washer and the hitch pin.
